Ernakulam, Kerala – 682002

Education

Bachelor of Technology in Computer Science and Engineering 2022 – 2026
Relevant Coursework: DS & Algorithms, DBMS, OS, Networks, AI, ML, Software Engineering

Experience

Next Gen Pro June 2025
AI & Machine Learning Intern

- Worked on machine learning and computer vision projects involving image classification and predictive analytics.
- Applied data preprocessing, feature engineering, and model evaluation techniques to improve model performance.

Corizo (in collaboration with Wipro) Oct. 2024 – Nov. 2024
AI Project Intern

- Developed machine learning solutions for healthcare analytics and disease prediction.
- Utilized algorithms such as XGBoost, SVM, and K-Means clustering for predictive modeling tasks.

Projects

Cardiovascular Disease Prediction | *Flutter, Flask, Python, Scikit-learn*

- GitHub Repository
- Accomplished a full-stack cardiovascular disease prediction application delivering instant clinical risk assessments across iOS, Android, and Web platforms.
- Trained a RandomForestClassifier on 13 clinical metrics and integrated a RESTful Flask backend API with a cross-platform Flutter frontend.
- Implemented data preprocessing, feature engineering, and model evaluation workflows to ensure reliable disease risk prediction.

Automotive Image Classification | *TensorFlow, Streamlit, EfficientNetB0*

- GitHub Repository
- Developed a robust automotive image classification system capable of identifying 196 vehicle classes using transfer learning with EfficientNetB0.
- Applied image preprocessing and augmentation to improve model generalization and classification accuracy.
- Developed an interactive Streamlit web interface that enables users to upload vehicle images for instant classification.

Pokemon Game | *Python, PokéAPI, Game Development*

- GitHub Repository
- Engineered a functional Pokémon-style RPG game engine with custom collision detection and dynamic battle zone interactions.
- Optimized a sprite caching system via the PokéAPI and developed robust rendering logic in Python.
- Implemented efficient asset management and tile-based world navigation to ensure smooth gameplay.

Technical Skills

Languages: Python, Java, C, SQL
Frameworks & Libraries: TensorFlow, Scikit-learn, Flutter, Flask, Streamlit, Pandas, NumPy
Tools & Technologies: Git, GitHub, REST APIs, Machine Learning, Deep Learning, Computer Vision

Achievements & Certifications

- Robotics in AI & ML – Certified workshop participant (Shristi Campus, Technopark, Trivandrum)
- Successfully completed AI & ML internships at Corizo and Next Gen Pro

Personal Details

Date of Birth: 06 May 2004
Languages Known: English, Malayalam, Hindi
